

LIGHTING SERVICES

Light Fixture Cleaning

Light fixture cleaning involves cleaning of the inside and outside of the fixture and the lamps and blubs therein. Light Fixtures, both flourescent and incandescent, tend to accumulate dust and soil over a period of time, thereby reducing their lumen- effeciency.

Light cleaning will increase the illumination delivered at the user- level due to the removal of dust and dirt from the lamps and blubs. Further, the removal of dirt and grime from the inside of the fixture will increase the reflectivity and efficiency of the fixture.

Light Lense Cleaning

In most cases, there is no need to replace those prismatic light lense, have us clean them and save more money.

Our specialty cleaning services offers light fixture cleaning and light lense cleaning.

Usually this service is packaged with one of our other cleaning services, such as, ceiling cleaning, group relamping, spot relamping or light retrofitting.

Light Retrofitting

Light Retrofitting is the process of auditing old lighting systems and replacing electrical componets with new more efficient equipment.

Componets such as magnetic ballasts and T- 12 Lamps, are replaced, for the energy efficient lighting componets such as electronic ballasts, T- 8 lamps and reflectors achieving the proper combination of energy efficiency.
